

Productivity Shastra — Documentation Index

Productivity Shastra — Project Documentation

Official documentation set for the unified **Productivity Shastra** web application (internal codename for the merged suite built for the boss). These documents are the single source of truth for product, architecture, and engineering decisions and are **kept up to date as the project evolves** (merge → backend → deploy).

#	Document	Purpose
01	Architecture	System & code architecture, folder layout, how the tools are merged
02	PRD	Product Requirements — what the product is, who it's for, the tools
03	TRD	Technical Requirements — stack, conventions, build, routing, styling
04	App Flow	End-to-end user & navigation flow across the shell and every tool
05	Backend Schema	Proposed data model & API for the (future) backend

Status snapshot

- **Phase:** Frontend merge  complete and building green. Backend: not started (deliberate).
- **Last updated:** 2026-06-08 (frontend merge of 5 tools into one app).
- **Maintainer note (for Claude):** When you finish a meaningful change — merging a tool, adding the backend, learning a tool's deep logic — update the relevant doc here and the handoff in `./CLAUDE.md`. Do not let these drift.

Formats

These are authored in Markdown (version-friendly and easy to keep in sync). They can be exported to PDF or Word on request — ask Claude to "export the docs to PDF" and a conversion step will be set up. Markdown remains the editable master.
